Synopsis. pandoc [options] [input-file]<sup>TM</sup>!. Description. Pandoc is a Haskell library for converting from one markup format to another, and a command-line tool that uses this library.. Pandoc can convert between numerous markup and word processing formats, including, but not limited to, various flavors of Markdown, HTML, LaTeX and Word docx. For the full lists of input and output formats, see ...

Section 3-3 : Differentiation Formulas. In the first section of this chapter we saw the definition of the derivative and we computed a couple of derivatives using the definition. As we saw in those examples there was a fair amount of work involved in computing the limits and the functions that we worked with were not terribly complicated.

Run the update script which will automatically create the necessary database tables that this extension needs.; To see math beyond a plain text output, follow instructions below for enabling various math output modes. Done <sup>TM</sup> Navigate to Special:Version on your wiki to verify that the extension is successfully

installed. To users running MediaWiki 1.24 or earlier:

### **Extension:Math - MediaWiki**

MediaWiki renders mathematical equations using a combination of html markup and a variant of LaTeX.. The version of LaTeX used is a subset of AMS-LaTeX markup, a superset of LaTeX markup which is in turn a superset of TeX markup, for mathematical formulae. Only a limited part of the full TeX language is supported; see below for details. By default SVG images with non-visible MathML are generated.

Use this printable as a summative test, an assessment to see what students have learned to this point. Have students put away their multiplication tables. Don't give this test as a one-minute drill. Instead, give students 15 or 20 minutes to complete the worksheet.
